MOLECULAR BIOLOGY

SARS- CoV-2 (COVID 19) Detection by Real Time PCR

SARS- CoV-2 (COVID 19) Detection by Real Time PCR **NEGATIVE**

Genx Diagnostics ICMR registration no. GXDND

Methodology : Real Time PCR

Equipment Used: BIO RAD CFX OPUS 96

Sample Type: Nasopharyngeal / Oropharyngeal Swab

Result Interpretation:

Positive: Indicates the presence of SARS-CoV-2 (COVID 19) in the given specimen

Negative: Indicates the absence of SARS-CoV-2 (COVID 19) in the given specimen

A **“Positive”** result is indicative of infection with SARS-CoV-2 (COVID 19) but does not rule out bacterial infection or co-infection with other viruses. The agent positive may not be the definite cause of disease.

A **“Negative”** result does not rule out infection. A careful consideration to combination of epidemiological factors, clinical history, examination, other relevant investigation findings and treatment history should be done.

Test Limitations:

- A Positive result does not distinguish between a viable/ replicating organism and a non-viable organism.
- False Negative results may be seen in samples collected too early or too late in the clinical course of the illness. Kindly refer to the latest ICMR guidelines.
- Presence of PCR inhibitors in the sample may prevent DNA amplification. Paradoxical results may arise due selection of inappropriate specimens and contamination during specimen collection.

- Sensitivity of this test depends upon the quality of the sample submitted for testing and stage of the infection.

Note: This test performance is validated at Genx Diagnostics.

Comments:

Kindly consult referring Physician/ Authorized Govt. hospital for appropriate follow up. Details of all the positive patients will be communicated to Epidemiology Cell – BMC. Please ensure to notify the local / state/ federal authorities as per the existing rules/regulations.

Clinical Background:

COVID-19 is a new disease, caused by a novel (or new) coronavirus SARS-CoV-2. Reported illnesses have ranged from mild symptoms to severe illness and death for confirmed COVID-19 cases. Symptoms like Fever, Cough, and Shortness of breath may appear 2-14 days after exposure.
